100 SERIES TRAFFIC PRO BED

Designed for Class 2 trucks, the 100 series comes in the Base Safety and Full Stake Body configuration, featuring either an 18 inch or 30 inch fold-down aluminum stake fence and two ESUs with safety restraint system. This series is designed primarily for small traffic control operations, flagging operations, and highway debris removal. This is also an option to supplement equipment requirements for large traffic control operations.

Aluminum fold-down stake fence evens the playing field for all of your employees. At least 30% lighter than steel, this stake fencing makes traffic control work less strenuous and demanding for employees.

Rigid posts and spring-loaded lock hinges keep the fence in place and prevent rattling. Meanwhile, quick disconnecting hinges make it easy to add, remove, or interchange stake fencing with sign and stand boxes. Aluminum, rubber bumpers, and catches prevent damage and corrosion.

TRAFFIC PRO TRAILER

The Traffic Pro Trailer is designed to enhance operational safety, efficiency, and response time for work zones. It is particularly beneficial for entities that operate on dedicated traffic control trailers in first-response, public event, and evacuation scenarios.

Available as a kit or installed onto a trailer, this trailer system is meant to be loaded with MOT equipment, and stored in the yard, ready to be hitched and deployed quickly.

Upon arrival to a work zone or incident, the trailer can be positioned so it immediately shields an area. Its easy-to-remove stake fencing and swing brackets ensure that equipment remains safely accessible from the safe and protected side of the trailer. This option enables employees to work efficiently without compromising safety.

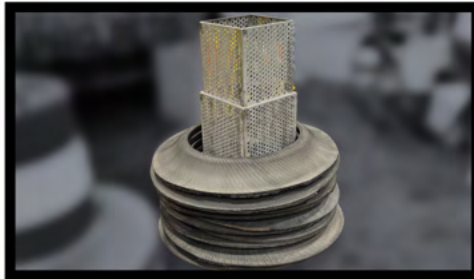

EXTENDED SIGN STAND BOX

Keep many signs and stands organized and safely accessible. Positioned against the head board of a truck this extended sign and stand box sits right behind the ESU, where employees can safely access stands from their ESU. Extending across the truck bed, signs are always accessible from the safe side of the truck. Holds 24 large sign stands and many signs.

TIRE RING HOLDER

Cut strenuous lifting out of deploying barrels with the Tire Ring Holder. Forklift the holder, with all of the rings stacked on it, onto your truck bed and go. While deploying barrels slide rings from the holder over, onto the barrel, and deploy. Once rings get below a tier on the holder, simply lower the holder for easier access to the remaining rings.

PERIMETER LIGHTING

Boost safety and visibility with Traffic Pro Bed's perimeter lighting system. This system projects a 240° light around the truck to define a safe walkway, aid cone alignment, deter motorists, and signal that the MOT truck is active and manned. This unique lighting system also defines a buffer of space for the vehicle and enhances its movement from afar.

SAND BAG HOLDER

Give your sand bags their own dedicated space on your truck where they're all together, organized, and out of the way. Positioned right next to the ESU, this product provides convenient and ergonomic access for deploying and collecting sand bags. It also functions as a secured storage space for equipment like a tool box or cooler.

SINGLE DOOR SIGN BOX

Keep signs organized, protected, and safely accessible. Sign box keeps signs separate from other equipment to prevent the standard wear and tear of roll-up and dibond signs that results from piling and weighing down signs with other equipment in the bed. Making them stay in new and near new condition up to three times longer.

TYPE-2 BARRICADE HOLDER

Located in front of the ESU the Type-2 barricade holder securely stores barricades where they are easily accessible from the side of the truck. ergonomic rack design and location allow employees to quickly and comfortably deploy or store barricades.
