

TRAFFIC PRO TRAILER

BUILT TO SAVE

Description

The Traffic Pro Trailer is designed to enhance operational safety, efficiency, and response time for work zones. It is particularly beneficial for entities that operate on dedicated traffic control trailers in first-response and evacuation scenarios. Sold as a kit (with or without trailer), this product can be installed onto most trailers to turn them into a traffic control dream! Once installed to a trailer and loaded with MOT equipment, simply store it in the yard where it is out of the way and ready to hitch. Then, when it's time to go, just hitch it up and head out to an incident in minutes.

Upon arrival to a scene, trailer can be driven and maneuvered right into the exact position you need it to be in order to help divert traffic and protect the area and its personnel, without compromising safe access to equipment. Simply access equipment from the safest point of the trailer by using the removable stake fencing around the exterior, so equipment can be accessed from any side safely.
