

FIRST RESPONDER TRUCK BED

DESCRIPTION

Built for first responders and temporary roadway services, our First Responder Truck Bed (FRB) delivers safety, efficiency, and reliability when it matters most. Featuring a Scorpion TL-3 attenuator, the FRB is a safer, more affordable blocker vehicle than a traditional fire engine, while its shorter length and minimal turn radius allow crews to move swiftly through heavy traffic congestion. Two equipment drawers maximize equipment organization and accessibility, and left- and right-side accessible storage bays ensure up to 90% of equipment can be accessed safely from the safe side of the truck. Tall storage cabinets offer dedicated space for cones and essential traffic equipment like signs and stands. This truck bed is designed to be long-lasting, constructed from 10-gauge galvanized steel, stainless steel hardware, and a powder-coated finish to keep the unit looking sharp and performing reliably for years to come.

OPTIONS

- Scorpion TL-3 attenuator
- Jtech Laneblade
- VMS or arrow board
- Storage drawer
- Cone tilt
- Advanced work lighting
- Advanced amber lighting
- Camera systems
