TRAFFIC PRO EQUIPMENT

For years, Traffic Pro Beds has been at the forefront of innovation in traffic control management; consistently delivering products that are Built to Save Lives, Time, and Money by enhancing traffic control safety and optimizing operational efficiency, organization, equipment longevity, storage capacity, and cost savings.

Our commitment to making road work safer and operations smoother for boots on the ground employees is the driving force behind everything we do. Now, we are proud to scale that mission with the launch of our subsidiary company Traffic Pro Equipment (TPE). This new business represents the culmination of our expertise and dedication to developing practical and innovative solutions for the diverse and unpredictable circumstances that crews face daily; to ensure they can work safely and efficiently in any road traffic scenario—whether it's construction, events, evacuation, or incidence response.

This announcement marks a new age for Traffic Pro as a provider of diversified, safety-driven, innovative solutions for the entire traffic control industry at large.

TRUCK BED INSERT

Keep many signs and stands organized and safely accessible. Positioned against the head board of a truck this extended sign and stand box sits right behind the ESU, where employees can safely access stands from their ESU. Extending across the truck bed, signs are always accessible from the safe side of the truck. Holds 24 large sign stands and many signs.

TIRE RING HOLDER

Cut strenuous lifting out of deploying barrels with the Tire Ring Holder. Forklift the holder, with all of the rings stacked on it, onto your truck bed and go. While deploying barrels slide rings from the holder over, onto the barrel, and deploy. Once rings get below a tier on the holder, simply lower the holder for easier access to the remaining rings.

EXTENDED SIGN AND STAND BOX

Keep many signs and stands organized and safely accessible. Positioned against the headboard of a truck, this extended sign and stand box sits right behind the ESU, where employees can safely access stands from their ESU. Extending across the truck bed, signs are always accessible from the safe side of the truck. Holds 24 large sign stands and many signs.

EXTENDED SIGN STAND BOX

TPB's signature Built to Save system adapted for a trailer. Ideal for quick response and incident management. Sign and stand boxes keep equipment secured, organized, and easily accessible from both sides of the trailer. Fold-down and removable aluminum stake fencing make it easy to safely access the trailer from any side.

STOP/SLOW PADDLE BOX

This unique option is installed underneath the deck of the truck and provides space to hold up to four stop/slow paddles. Always have stop/slow paddles secured, accessible, available, and out of the way. Keep them organized, and separate from the rest of the equipment to prevent damage.

ALUMINUM STAKE FENCING

Make traffic control work easier on employees with this aluminum stake fencing. At least 30% lighter than steel, this option makes access to equipment easier and safer. Quick disconnecting hinges allow employees to access equipment from the safe side of the truck or trailer. Truck bed stake fencing specifically also features fold down hinges in key sections.

SAND BAG HOLDER

Give your sand bags their own dedicated space on your truck where they're all together, organized, and out of the way. Positioned right next to the ESU, this product provides convenient and ergonomic access for deploying and collecting sand bags. It also functions as a secured storage space for equipment like a tool box or cooler.

SINGLE DOOR SIGN BOX

Keep signs organized, protected, and safely accessible. The sign box keeps signs separate from other equipment to prevent the standard wear and tear of roll-up and dibond signs that result from piling and weighing down signs with other equipment in the bed. Making them stay in new and near new condition up to three times longer.

TYPE-2 BARRICADE HOLDER

Bolted to the either side of a truck bed, the Type-2 barricade holder securely stores barricades where they are easily accessible from the side of the truck. Ergonomic rack design and location allow employees to quickly and comfortably deploy or store barricades while on the move.

These products are designed and distributed through Traffic Pro Equipment, a Traffic Pro Bed subsidiary.
