

TPE COLLAPSIBLE TIRE RING HOLDER*

BUILT TO SAVE

DESCRIPTION

Your solution for stacking, moving, storing, and deploying tire rings for traffic barrels. Cut strenuous lifting out of deploying barrels with the collapsible Tire Ring Holder. Ergonomic, collapsible tiered design allows for easy, no-hassle, one-handed ring transfer. The forklift-friendly base allows the holder to be easily transferred or set on a truck. While deploying barrels, easily slide rings from the holder over and onto a barrel, and deploy. Once the rings get below a tier on the holder, simply lower the holder down a tier to continue sliding rings from the holder to the barrel.

ERGONOMICS

The tire ring holder is designed to minimize—and potentially eliminate—excessive lifting, fatigue, long-term injury risk, and other physical strain associated with barrel deployment. Its cubed shape enables a more stable, leveraged grip on tire rings, **promoting safer and more anatomically efficient repetitive movements.** By collapsing tiers down to the lowest setting during loading, rings can be seamlessly dropped over and onto the holder with minimal effort. During deployment, collapse the tiers to **reduce excessive squatting and awkward ranges of motion** while moving the rings on to barrels. The forklift-friendly base allows the holder to be loaded at ground level and transferred directly onto a truck, **eliminating unnecessary manual lifting.**

DETAILS

Eliminate strenuous, excessive lifting and fatigue while dealing with tire rings in every circumstance—in transit and throughout deployment. This product allows for a safe and efficient barrel deployment by optimizing how tire rings can be grabbed or loaded in every circumstance, minimizing the effort and physical toll required during a barrel deployment.

Forklift-friendly base makes it easy to move the holder throughout a yard as well as on and off a truck.

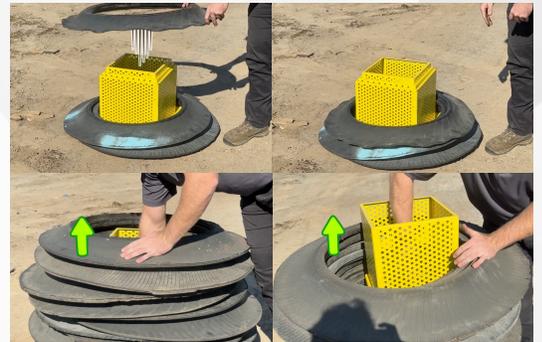

To load, simply collapse the holder to its lowest tier and **seamlessly drop rings over and onto the holder**. Then, once a tier is surpassed by rings, simply bring the holder up to the next tier to keep rings stable while continuing to load.

During deployment, don't waste time and energy on awkward holds, excessive lifting, and unexpected catches. **Simply grab the inside of a ring and slide from the holder over and onto the barrel and deploy**. Cube-shaped design allows employees to dynamically grab tire rings with just one hand, minimizing uncomfortable squatting and preventing catches.

Holds approximately 20 to 22 tire rings.

HIGHLIGHTS

- Eliminates excessive lifting during barrel deployment.
- Collapsible tiered design allows easy, one-handed ring transfer.
- Forklift-accessible design makes loading and unloading effortless.
- Smooth, no-hassle operation for efficient workflow.
- Adjustable height — lower tiers for easy one-hand access.
- Speeds up deployment of barrels and improves work zone efficiency.
